

OPTIONS

GRAIN ATTACHMENTS

For gentle seed handling, Covington grain attachments feature a divided delivery design and an inclined seed plate. With only a small amount of seed in the front section, there is no pressure on seed being lifted by plate cells.

SINGLE

Each unit has a one-compartment seed hopper and a single seed plate. Also features an adjustable tilt bracket. Planting speed varies by crop between 2 to 4 mph.

STANDARD DUPLEX

Each unit has a two compartment seed hopper and two seed plates. Plates are synchronized so that seeds drop alternately from the two units. This allows increased speeds (to 3-5 mph.)

SPEED MASTER DUPLEX

Each unit has a two compartment large seed hopper and two large seed plates. Plates are also synchronized so that seeds drop alternately from the two units, planting up to 6 mph. Order with or without seed hopper extensions.

COTTON DROPPING ATTACHMENT

...for planting gin-run cotton. With a vegetable drilling attachment (not shown) small seeds such as turnips, collards and mustard can be planted. Easily interchangeable with hardware provided.

RUBBER TIRE

... increases traction in any type soil. Flexing of tire sheds heavy or wet soils.

The best farmers find ways to be successful. With the recent advent of "sundown" farming, Covington sales have seen an increase both nationally and internationally. Check these features and see why your next planter should be a Covington.

- Easy to set up and operate.
- Beds, plants, fertilizes in one operation.
- Seeds are always planted exactly in the center of fertilizer streams so seeds do not come in contact with fertilizer.
- Plant up to 6 mph (with Speedmaster Duplex Grain attachment).
- Adjustable row widths, fertilizer flow and seed distribution.
- Low initial cost and economical maintenance.

You know from experience what works best for you. Covington's great performance on small and medium-sized farm operations has proven itself since 1911.

Covington

PLANTER COMPANY INC.

PIONEERS IN MECHANICAL PLANTING
SINCE 1911

COVINGTON

COVINGTON PLANTER COMPANY introduced its first mechanical planting and fertilizing equipment in 1911, a significant achievement in the early years of this century. Since then Covington has continued to produce reliable equipment for small and large operations.

The contributing element to Covington's success is dedication to building high quality, cost effective planters that are innovative, yet simple to operate.

Covington Planters are designed to fertilize and plant all row crops, including gin-run or delinted cotton, peanuts, beans, grains and vegetables in one easy operation. You can depend on Covington to give you accurate depth control on uneven land and trouble-free planting without clogging from trash and other debris.

This brochure presents the Covington Planter product line . . . a line who's high standards deliver quality performance at a price farmers can live with.

TP-6A SIDE DRESSER

TP-3A (with Wood Box - Not Shown)

Sturdy and efficient, the Covington two-row Side Dresser mounts quickly and easily on a cultivator frame. Vibrator pan handles hard, lumpy fertilizer at any distribution speed. Spout spacing is available for any normal width rows.

TP-46 PLANTERS

The TP-46 features a time-tested design that is both simple to operate and simple to maintain.

This planter has proven itself as a true "work horse." The TP-46 is available with or without the cotton planting attachment. For planting all other seeds three optional grain attachments are available (see back panel).

Features:

- Vibrator fertilizer distributor
- Presser wheel-driven seeding and fertilizing units
- Adjustable fertilizer flow
- Adjustable seed depth

TP-66 PLANTERS

This planter is identical to the TP-46 except that it features a fiberglass fertilizer hopper for better corrosion resistance and sealed ball bearings on the presser wheel and disc assemblies.

TP-61 PLANTERS

The TP-61 features a rotary type fertilizer distributor which is independently ground driven for consistent flow of fertilizer. Quick removal of the planters (2 bolts) leaves this fertilizer attachment in place for side dressing crops as they are cultivated. Planters handle seeds gently using inclined plates at speeds up to 6 mph (with SpeedmasterDuplex Grain Attachment).

The TP-61 Planter is easy to set up and operated. It beds, plants and fertilizes in one operation placing seeds between two fertilizer streams so they are not damaged from contact with fertilizer.

TP-707 CULTIVATOR

Covington's 1-row cultivator was specifically designed for the small acreage farmers. It features spring steel shanks and a removable rear bar which makes planter mounting and dismounting a simple and easy operation.

TP-68 PLANTERS

The TP-68 is a toolbar-mounted planter with parallel linkage floatation for following uneven terrain. Quick depth adjustment, by moving a spring-loaded pin, makes it the farmer's "friend." The TP-68 is available in a close-row model (MD3R shown) which places seeds in parallel rows 9" apart.

Research at Auburn University Experiment Station, Headland, Alabama, has shown an increase in peanut yields of about 10% when using close-row spacing verses standard-row spacing.

The 16" wide press wheel seals both drills and leaves a smooth surface for band spraying herbicides.

OUR 1-ROW PLANTING UNIT

This complete planter matches the lasting quality of Covington's line of planters, for garden and multi-purpose single-row planting. Easy and quick installation. (Shown with and includes one TP-46 planter, a TP-706 opening foot, and a TP-707 cultivator).

(All planters sold by the row; cultivator frames and toolbars sold separately. See back panel for further information on grain attachments and other options.)
